Product Description

Harmonized System Product Code: HS 842211

Product Description: Dishwashers

This Harmonized System product code represents the aggregation of the following Combined Nomenclature codes:

- *842211 00* - Dishwashing machines of the household type

The table below shows the characteristic values of the considered codes, referring to the total global trade in 2023.

Code	Value (billion \$)	Quantity (million Kg)	Quantity (million units)	Prices (\$/Kg)	Prices (\$/unità)
842211 00	5.6	807	20.5	6.9	271

If interested, in case the considered code is an aggregation of multiple Combined Nomenclature codes, the same tables contained in this Report can be generated for a single code or different aggregations of the same.

The report can be produced in USD (\$) or EUR (€).

HS 842211: Dishwashers

Market imports: EU Europe

Methodological Note

A company operating in a specific market area (comprising one or more countries) that wants to have a comprehensive view of the competitive landscape present therein can integrate its own data with detailed information on specific competitor countries (identified by the company itself), benefiting from the integration of corporate market intelligence sources with information obtainable from foreign trade statistics.

The tables in this report offer an integrated overview of all international exporting countries of the product of interest and make it possible to measure the levels and dynamics of each competitor's exports in value, quantity, and prices, for a market defined by a single country or a reference geographic area.

The data reported in the tables are derived from the ExportPlanning Database, developed from UN data (Comtrade db), Eurostat (Comext db), and the US Census Bureau (UsaTrade db) and accessible via the **Annual Trade Data & Forecast** section of the ExportPlanning.com platform (Ulisse Datamart). The basic unit of the Ulisse Datamart is the **Foreign Trade Flow** between two partner countries for a given product.

The **quantities** are expressed in Kg, and represent informative metrics that allow for analysis of the trends characterizing quantities and prices. Where available, a table measuring the **quantity expressed in a supplementary unit** (units, m², liters, etc.) is also provided.

The **prices** are calculated by the ratio between values and the related quantities: values/Kg and values/supplementary unit of measure (where available).
