Product description

Harmonized System Product Code: HS 842211

Product Description: Dishwasher

This Harmonized System product code represents the aggregation of the following Combined Nomenclature codes:

- 8422 11 00 Dishwashing machines of the household type

The following table shows the characteristic values of the codes considered, referring to total world trade in 2022.

Code	Value	Quantity		Prices	
		mln Kg	mln of unit	\$/Kg	\$/unit
8422 11 00	6.3	940	24	6.7	264

In case of interest, if the code under consideration turns out to be an aggregation of several Combined Nomenclature custom codes, the tables can be reproduced for a single code or for aggregations of them.

Methodological Note

A company operating in a specific market area (composed of one or more countries) that aims to gain a comprehensive understanding of the competitive landscape present there can integrate its existing data with detailed information on specific competitor countries (identified by the company). This integration leverages corporate market intelligence sources with information derived from foreign trade statistics.

The tables in this report provide an integrated overview of all international exporting countries for the product of interest. They enable the measurement of levels and dynamics of each competitor's exports in values, quantities, and prices for a market defined by a single country or a reference geographic area.

The data presented in the tables are derived from the **ExportPlanning Database**, developed based on UN data (Comtrade db), Eurostat (Comext db), and the US Census Bureau (USA Trade db). This information is accessible through the **Annual Trade Data & Forecast section of the ExportPlanning.com** platform (Datamart Ulisse). The basic unit of Datamart Ulisse is the **Foreign Trade Flow** between two partner countries for a given product.

Quantities are expressed in kilograms and serve as informative measures allowing the analysis of dynamics characterizing quantities and prices. Where available, the table also includes the **quantity measured in an additional unit** (units, square meters, liters, etc.).

Prices are calculated through the ratio between values and their corresponding quantities: values/kilogram and values/additional unit of measurement (if applicable).
